TECHNICAL ABSTRACT

Impactors.io is a technological platform for the social and grassroots innovation ecosystem. Impactors unites innovators, social enterprises, research institutions, angel investors, venture capitalists, academia, impact investors, corporates, government institutions, civil society organisations on one platform. Impactors.io's primary function is to be a social network for the social and grassroots innovation ecosystems. It provides a central repository of social and grassroots innovation projects. A social or grassroots Innovator can post information on their project. They can choose what to disclose on their project. Other actors in the ecosystem can view the project and have relevant information, allowing any actor to act upon it. The platform equally has useful information and links for the ecosystem. It is the go-to platform for anything related to social and grassroots innovation in Mauritius (as a first phase and in the Indian Ocean as a second phase).

Key Words: Technological platform, innovation ecosystem, social network, central repository
