

# Green Gamification Interactive Website for Ecological Impacts

## PW Lab Ltd

PW Lab with its experience in Gamification will develop an interactive and informative website which will explain the ecological impact of the oil spill on marine life, the fauna and flora and how hydrocarburants affect the soil and nearby vegetation.

**A Gamified portal explaining the impact of the oil spill** will make it easier for citizens (Adults and Children) to interact with the website and understand the complex scientific terms related to the Oil Spill impact.

This web portal will be one of a kind in Mauritius, where visitors will not only be able to scroll up and down to actually see a Gamified visual representation how hydrocarbures sinks in sea water and affect the marine ecosystem but also brings in a innovation where the users will also be able to scroll horizontally (**Never been done before in Mauritius**) and see the effect of hydro carburants on the fauna and flora on the shorelines of the affected area (Mangroves and other vegetation).

<b>Total Project Value</b> MUR 612,000	<b>Amount Funded</b> MUR 300,000
---	-------------------------------------

**Duration: 3 Months**
