Mr Yogesh Koonjul	Mo Sports Ltd
TECHNICAL ABSTRACT	
<p>The availability of broad coverage of data and mobile networks in Mauritius represent a huge opportunity to provide services, based on innovative technologies that would trigger development and improve people's lives. This project caters most specifically for the needs of athletes and sports clubs which have longed operated on an archaic system. Tailored for both the service providers and the users, this project will set the basis for faster booking process, operational efficiency, enhanced communication and bonding between the facility owners/managers and its users and allow the creation of new avenues for coaches and athletes to make a living out of their sport. Hence, the followings are being proposed:</p> <ol style="list-style-type: none">(1) Developing a web application for facility owners/managers and users to access accounts, process online payments and manage bookings;(2) Assuming users engagement fares well in the medium term, then we propose to build the mobile version of the application with enhanced specificities that is easily accessible from any devices (smartphones, tablets and personal computers); and <p>The potential commercial applications will include, but not limited to, licensing and patenting of the software, subscription accounts for different type of users and advertising/communication outlet for sports retailers.</p>
