

Smart Sanitizer

by

BONNIER GROUP LTD

This project aims to provide a safer way to distribute hand sanitizer and detect temperature for a large number of people with our Smart Sanitizer dispenser! Our device holds up to 5 liters of sanitizer gel. This reduces refill time and saves on plastic waste. The electronic infrared thermometer automatically reads temperature and has a light indicator. An alarm sounds when a high temperature is detected. The unit can have customized color and logo branding. Our next aim is to fully automate first stage Covid-19 and health safety procedures to save time, money, and protect health.

Project Value (Rs): 1,056,000

Amount funded by MRIC (Rs:) 525,000
