

Facilitation, Management and Tracking of Micro Donations to Social and/or Environmental Programmes using a Technological Application

Ecosis Ltd

The project aims to:

Allow for small campaigns to be funded.

Allow for micro donations

Removal of intermediaries, and increasing efficiency

Promote transparency in the tracking of donations and its use

Promote trust, which can lead to an increase in donations

Promote good governance

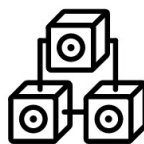

Provide better security

The innovativeness of the project is the

1) The possibility for a citizen to post easily a project to be funded. It empowers and helps individuals with impactful ideas to succeed in bringing positive change.

2) The use blockchain technology to track information and provide real time information on a single platform regarding donations.

3) The project also aims at moving from organisation based funding to campaign/progamme based funding. It brings better traceability, greater transparency, increased efficiency and better security.
